With the new O-range ECON® 2 / 3 / 4 - gang junction boxes, KAISER offers the perfect basis and especially easy processing for the fitting of all standard installation accessories in multiple combinations. Thanks to their large installation opening without a central separation, it is easy to wire multiple devices together and even makes possible the use of pre-wired installation accessories. If different electrical circuits – e. g. for supply and communication connections – are used within a combination, the individual accessory installation spaces can be separated easily and in a standardised way.

- · Easy installation of pre-wired accessories without spatial separation
- · Maximum flexibility when fixing accessories, generous tolerance compensation
- · Standardised separation of individual installation openings using a bridge
- · Complete mounting and installation with just one screw drive
- $\cdot$  Can be combined with all O-range® programme applications
